Education

Vellore Institute of Technology , Chennai
Bachelor of Technology (GPA: 10 / 8.78)

2019-2023
Chennai, TN

Experience

Accenture Solutions

Senior Software Development Analyst

February 2026 – Present

Bengaluru, Karnataka

- **Architected an end-to-end RAG pipeline** using LangChain + Azure OpenAI (text-embedding-ada-002, 1536-dim) with parent-child chunking (512/128 tokens, 15% overlap) and Azure AI Search hybrid retrieval (BM25 + cosine similarity), automating SRS, URS, and test plan generation; cut hallucination rate from **38% → 12%** (GPT-4-judge, n=300) and reduced documentation effort by **40%** across 6 project teams.
- **Engineered a Python async REST backend** for on-demand SDLC artifact generation using LangChain LCEL with streaming output; implemented Redis semantic caching achieving a **39% cache-hit rate**, reducing p95 latency to **2.3s** on 3K-token payloads and cutting Azure OpenAI token spend by **22%** at 200+ DAUs — delivering measurable LLM cost and latency optimisation in production
- **Implemented JWT claim-based RBAC** using Spring Boot + Spring Security across a multi-tenant LLM platform; integrated prompt-level trace observability across **20K+ monthly LLM invocations**, reducing mean debug resolution from 2.5 hrs → **45 min** — adopted by 6 client teams with zero unauthorized-access incidents post-deployment.

Accenture Solutions

Software Development Analyst

Sep 2023 – Jan 2026

Bengaluru, Karnataka

- **Built a life sciences workflow automation platform** from scratch using Java (Spring Boot) + React with REST APIs; applied rule-based NLP to parse and validate semi-structured YAML/JSON metadata fields, reducing manual data-entry effort by **40%**, improving downstream accuracy by **35%**, and cutting study onboarding by **3 days/cycle** across cross-functional research teams.
- **Designed a GxP/SOC-2 compliant audit logging framework** leveraging Azure Cosmos DB change feed for real-time event streaming and Azure SQL for structured retrieval; achieved **100% event traceability** at sub-100ms write latency under peak load, reducing issue investigation time by **70%** across 3 client compliance audits

Projects

IPLocationService | Node.js, Django, Flask, Rest

- **Designed and implemented an IP location service** with multiple providers, utilizing load-balancing algorithms (round-robin, weighted response) to optimize provider selection, and delivering detailed JSON responses with city and country data
- Used **Memcached** caching to store error data, response times, and request counts from the last 5 minutes for **routing logic** and **load distribution** to the best available provider.
- Added a **rate limiter** to manage request volumes (200 requests per minute and **12,000 requests per hour**).

Technical Skills

Languages: Java, C++, C# JavaScript, Python, SQL, HTML

Technologies: React.js, Django, Flask, Spring Boot, Postman, Grafana, ASP.NET, Git, Redis, MySQL

Concepts: RAG, LLM Integration, Vector Embeddings, RBAC, JWT, Prompt Engineering, NLP, LangChain, System Design

Cloud Technologies: Azure OpenAI Service, Azure AI Search, Azure Blob Storage, Azure SQL, Azure Cosmos DB

Networking and Ops: TCP/IP, DNS, Load Balancing, Rate Limiting, HTTP · Docker, Kubernetes (fundamentals), Git

Certifications

AWS Solutions Architect-Associate

Google Cloud Platform- Professional Cloud Architect

Microsoft AZ-900 :Microsoft Azure Fundamentals

Google Cloud Platform- Professional Cloud Devops Engineer

C/C++ Coding Training - NIIT Institute, Hyderabad
